

Synergy Network Tokenomics

1. Executive Summary

Token Name: Synergy Token

Token Symbol: SNRG

Total Supply: 12,000,000,000 SNRG (fixed, hard-capped, non-inflationary)

Minting: Disabled after genesis

Utility: SNRG is the native governance, security, staking, and economic coordination token of the Synergy Network.

Primary Functions:

- Validator staking and network security
- Governance and DAO voting
- Protocol fees and network services
- Ecosystem incentives and developer rewards
- Economic coordination across the Synergy Network

SNRG is designed as a **long-term coordination and security asset**, not a short-term speculative instrument.

2. Allocation Overview

Total Supply: **12,000,000,000 SNRG**

Category	Tokens	%
Validators / Staking / Security	2,400,000,000	20.0%
Token Sales (Initial, Private & Public)	4,200,000,000	35.0%
Ecosystem / Developer Incentives	1,080,000,000	9.0%
Liquidity & Market Infrastructure	1,200,000,000	10.0%
Marketing & Growth	1,020,000,000	8.5%
Strategic Partnerships / Integrations	600,000,000	5.0%
DAO / Governance Reserve	480,000,000	4.0%
Foundation / Treasury	480,000,000	4.0%
Team & Support	540,000,000	4.5%
Total	12,000,000,000	100%

3. Locked Token Sale Architecture

All token sale participants receive a **locked SNRG entitlement token issued on the Base network**.

These locked tokens:

- Are **non-transferable**
 - Cannot be traded on secondary markets
 - Do **not** contribute to circulating supply
 - Represent a **vesting-controlled claim** on future native SNRG
-

4. Token Sale Phases & Pricing

Phase	Allocation	Price
Early Supporters Round	600,000,000	\$0.0026
Early Growth Round	900,000,000	\$0.0038
Strategic / Private	1,200,000,000	\$0.008–\$0.012
Public Sale	1,500,000,000	\$0.02–\$0.03
Total	4,200,000,000	—

Target Initial Public Listing Price: \$0.05

Pricing reflects:

- Increasing network maturity
- Expanding access
- Reduced execution risk over time
- Progressive reduction in discounting

5. Investor Vesting & Unlock Schedules

5.1 Early Supporters (\$0.0026)

- **Instrument:** Locked Base token
- **TGE Unlock:** 5%
- **Cliff:** 6 months
- **Remaining:** Linear vesting over 24 months
- **Redemption:** Gradual migration to native SNRG

5.2 Early Growth Round (\$0.0038)

- **Instrument:** Locked Base token
- **TGE Unlock:** 7.5%
- **Cliff:** 3 months
- **Remaining:** Linear vesting over 18 months

5.3 Strategic / Private Investors

- **Instrument:** Locked Base token
- **TGE Unlock:** 10%
- **Cliff:** 3 months
- **Remaining:** Linear vesting over 12–18 months (round-specific)

5.4 Public Sale Participants

- **Instrument:** Locked Base token
- **TGE Unlock:** 15–20%
- **Remaining:** Linear vesting over 6 months

All sale participants are subject to lockups.

There are no unrestricted early allocations.

6. Team & Support Vesting

Allocation

- **Total:** 540,000,000 SNRG (4.5%)

Vesting Schedule

- **TGE Unlock:** 20%
- **Cliff:** 12 months
- **Remaining:** Monthly vesting over 36 months
- **Total Vesting Duration:** 4 years

Team tokens vest **more slowly than investor tokens**, reinforcing long-term accountability and execution alignment.

7. Validator & Staking Emissions

Allocation

- **Total:** 2,400,000,000 SNRG (20%)

Mechanics

- No TGE release
- Distributed as staking rewards over multiple years
- Emission rates governed by DAO parameters
- Slashing penalties recycle tokens back into the security pool

Staking rewards are designed to:

- Secure the network
 - Incentivize long-term participation
 - Avoid excessive early inflation
-

8. Liquidity & Market Infrastructure

Allocation

- **Total:** 1,200,000,000 SNRG (10%)

Usage

- DEX liquidity provisioning
- CEX market-making agreements
- Cross-chain liquidity support

Tokens are deployed **progressively**, not pre-loaded at launch.

Liquidity actions are governed, transparent, and auditable.

9. Ecosystem, DAO, and Treasury Controls

Ecosystem / Developer Incentives

- Grants, tooling, and infrastructure support
- Released based on measurable contribution milestones

DAO / Governance Reserve

- Protocol upgrades
- Emergency actions
- Long-term governance initiatives

Foundation / Treasury

- Operational runway
- Legal, compliance, and research expenses
- Infrastructure and security investment

All are subject to governance oversight and multi-sig controls.

10. Circulating Supply Discipline

At network launch and public listing:

- Majority of total supply remains **non-circulating**
- Early sale tokens are locked
- Team allocation is fully cliffed
- Validator emissions are not yet active

This structure ensures:

- Controlled price discovery
 - Reduced volatility
 - Predictable supply introduction
-

11. Summary

Synergy Network's tokenomics prioritize **long-term network health over short-term liquidity**.

All participants—team, investors, and ecosystem contributors—are aligned through enforced vesting, transparent unlock schedules, and governance-controlled supply mechanisms.

SNRG is engineered to support a durable, decentralized network economy rather than speculative churn.
